

News Release

QuestAir to supply second system to recover methane from biogas in Switzerland

For Immediate Release

12 March, 2007

VANCOUVER, B.C. – QuestAir Technologies Inc. (AIM: QAR; TSX: QAR) announced today that it has received an order for a second M-3200 PSA system to recover pipeline grade methane from biogas generated by an anaerobic digester in Switzerland.

Jonathan Wilkinson, President and CEO of QuestAir said that Verdesis Suisse SA has purchased QuestAir's system as part of a plant that will recover so-called 'biomethane' from biogas generated by the anaerobic digestion of agricultural and organic wastes at a site in Widnau, Switzerland.

"The Swiss Government has provided strong support for locally-sourced renewable energy through initiatives such as the 'Klimarappen' or 'climate cent' funding program, as well as direct tax breaks for Swiss utilities that supplement imported gas with locally-sourced biomethane."

"This government support, and the attractive economics of QuestAir's methane purification technology, has created strong pull for projects such as Widnau that convert agricultural waste into renewable biomethane fuel," Wilkinson said.

Roger Schneider, Director of GRAVAG Erdgas AG said "PSA is a proven, reliable technology. The rotary valve concept of QuestAir is innovative, convincing and state of the art. Emphasis is further given to the ecological impact – the concept of Verdesis Suisse SA with an integrated Flox burner for the PSA exhaust provides a maximum overall methane recovery (99 %) with zero methane emitted to the atmosphere."

The Widnau plant will be owned and operated by Biogasanlage Widnau AG. Product biomethane from the plant will be injected into the local natural gas distribution grid operated by GRAVAG Erdgas AG, a Swiss gas utility.

About the QuestAir M-3200

QuestAir's M-3200 purifies methane-containing gas streams such as landfill gas and anaerobic digester gas to high purity methane, suitable for supplementing existing natural gas supplies. The M-3200's optimized Pressure Swing Adsorption ("PSA") process and proprietary rotary valve technology deliver higher efficiency than conventional PSA systems in a more compact, cost effective package. QuestAir's M-3200 system can upgrade up to 300,000 cubic feet of biogas per day.

About QuestAir Technologies Inc.

QuestAir Technologies, Inc. is a developer and supplier of proprietary gas purification systems for several large international markets, including existing markets such as oil refining, biogas production and natural gas processing, and emerging markets such as fuel cell power plants and fuel cell vehicle refueling stations. QuestAir is based in Burnaby, British Columbia and its shares trade on the AIM Market of the London Stock Exchange Plc. and on the Toronto Stock Exchange under the symbol “QAR”.

Forward Looking Statements

Certain statements in this press release may constitute “forward-looking” statements which involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company, or industry results, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. When used in this press release, such statements use such words as “anticipate”, “believe”, “plan”, “estimate”, “expect”, “intend”, “may”, “will” and other similar terminology. These statements reflect current expectations regarding future events and operating performance and speak only as of the date of this press release. Forward-looking statements involve significant risks and uncertainties, should not be read as guarantees of future performance or results, and will not necessarily be accurate indications of whether or not such results will be achieved. A number of factors could cause actual results to differ materially from the results discussed in the forward-looking statements.
